- MR – Materials and Resources – Construction waste management
- EQ – Indoor Environmental Quality – Low emitting materials

Moisture, Mold and Mildew:

Vinyl wallcovering functions as a vapor barrier. If water or moisture becomes trapped between the wallcovering and wall cavity, an increased risk of mold may occur. Consult a building design professional on the proper use of vinyl wallcovering.

A mildew inhibiting agent has been added to help protect against fungal and other microbiological growth. No additives however; will prevent mold growth if moisture is allowed to accumulate and its sources are not eliminated.

Further protection against mold growth may be achieved with Versa Permavent®, a unique microventing technology that literally "breathes," helping manage the mobile moisture in walls.

Warranty:

VERSA is guaranteed to be free of defects in workmanship and material for five years.
